                                                                                                                                                                                                                                                                     Search completed: July 7, 2003, 23:43:14 Job time: 38 secs
                                                                                                                                                                                                                                                                                                The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for cidentifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically cengineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and concerned to express them are also useful for producing the proteins. They may be used to therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopolesis; and in the cartilage, tendon and/or nerve tissue growth or regeneration; commune suppression and/or stimulation; as anti-inflammatory agents; and concerned to the protein of leukaemias. AAU29510-AAU33304 represent the amino acid sequences of novel human secreted proteins of the invention.

Comp. Biochem. Physiol. 129C:115-127(2001).

-i-FUNCTION: CYTOCHROMES P450 ARE A GROUP OF HEME-THIOLATE
MONOOXYGENASES. THEY OXIDIZE A VARIETY OF STRUCTURALLY UNRELATED COMPOUNDS, INCLUDING STEROLDS, FATTY ACIDS, AND XENOBIOTICS.

-i-CATALYTIC ACTIVITY: RH + reduced flavoprotein + 0(2) = ROH + oxidized flavoprotein + H(2)0.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PRINTS; PR00385; P450.

Mar. Biol. Biotechnol. 2:338-345(1993).

-!- FUNCTION: CYTOCHROMES P450 ARE A GROUP OF STRUCTURALLY UNRELATED MONOOXYGENASES. THEY OXIDIZE A VARIETY OF STRUCTURALLY UNRELATED COMPOUNDS, INCLUDING STEROIDS, FAITY ACIDS, AND XENOBIOTICS.
-!- CATALYTIC ACTIVITY: RH + reduced flavoprotein + O(2) = ROH + oxidized flavoprotein + H(2)0.
-!- SUBCELLULAR LOCATION: Membrane-bound. Endoplasmic reticulum.
-!- INDUCTION: BY 3-METHYLCHOLANTHRENE (3MC) AND ISOSAFROLE (ISF).
